COMPANION LEXICAL INDEX

Attested Voynich-A Surface Words

Alphabetical/formal concordance for free composition

1,971 attested types / 715 shared four- to six-glyph routes
Corpus-first English edition, 31 October 2026

The role abbreviations indicate *observed manuscript positions*, not parts of speech or discovered translations. All entries come from the supplied pure Herbal A lexical corpus; no simulated word has been inserted.

How to Use This Concordance

The lexicon lists every distinct clean word form in the 85-page annotated pure Herbal A dataset. Forms are ordered by descending token frequency, so the most reusable evidence comes first. A separate CSV contains all counts, pages, bifolia, glyph segmentation, and source loci. Use this volume as a writing inventory: every entry may be employed freely wherever its observed role permits it. This document *does not* assert what any form means. The two annotation fields, **Meaning** and **Part of Speech**, are initially blank for every entry. They are not reconstructions or claims. Use the editable CSV or workbook for typing, or the printed cells for handwriting.

Column	Description
Rank, word	Rank and complete EVA surface word.
N	Token frequency in the defined corpus.
Length	Number of segmentation glyphs, with `ch/sh/cfh/ckh/cph/cth` counted as one glyph.
Roles	Space-saving codes for exact slots in which the word was *observed*.
Locus	One source line identifier, not the entire set of occurrences.
Meaning	Intentionally blank; readers may enter their own conjectured translation.
Part of Speech	Intentionally blank; readers may supply their own proposed category.

Role codes

Code	Slot	Details
P	PHW	First word in paragraph first line.
I	`F1_BODY`	Interior word of paragraph first line.
J	`F1_LF`	Last word of paragraph first line.
H	HEAD	First word in an ordinary inner line.
2	W2	Second word of an ordinary inner line.
B	BODY	Remaining interior word of inner line.
L	LF	Last word of an ordinary inner line.
F	`PF_HEAD`	First word of final line.
D	`PF_BODY`	Interior word of final line.
Z	`PF_LF`	Paragraph’s final word.

Only paragraphs with at least three lines contribute to slot counts. One two-line paragraph is included in the corpus frequency totals but absent from role classification; this is why rare words can have no printed role code. These entries are not errors and are accessible in the machine-readable table.

Complete Attested Surface Word Inventory (1,971 types)

The two rightmost columns are **reader-editable annotations**. Initially they are empty and are not part of corpus-derived evidence. The facing orientation is landscape to leave room for handwriting.

Registered Shared Routes (715 operational families)

A route is a contiguous series of four to six glyphs, and it may overlap other routes inside the same complete word. Inclusion criteria are: at least three containing tokens, at least two distinct complete forms, and appearances on at least two manuscript surfaces. The route is not a proven lexeme or semantic family.

Route (glyph units)	N	Types	Pages	Example carrier

What the Lexicon Does Not Contain

No noun, verb, adjective, subject, object, person, tense, aspect, number, case, referent, or translation has been assigned to an EVA word *by this research edition.* The new Meaning and Part of Speech fields are blank so that readers can write their own hypotheses; filling them does not turn them into attested facts. Analogical Grade-B innovations are *not* inserted in the attested index; the checker creates a separate innovation audit for them. For examples and a readable syntax of paragraphs, see *An Induced Compositional Surface Grammar*.
